DETAILED ACTION

Response to Arguments

Applicant's arguments filed January 5, 2005, with respect to the rejection(s) of claim(s) 1-5 under 35 U.S.C.103 rejection have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of claims 6-8.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 6-8 are rejected under 35 U.S.C. 102(b) as being anticipated by Uhler et al. (6,579,030). Uhler et al. discloses a method of attachment of a sensor to a wall of a fluid chamber, comprising: providing a passage through the wall into an interior of the fluid chamber, the passage having at least one radially inwardly projecting lug; providing a sensor having a condition sensing portion adapted for reception in the passage for fluid connection to the interior of the fluid chamber and an external system connecting portion, the condition: sensing portion having with a longitudinal axis and at least one radially outwardly projecting lug; providing a plurality of outward projections forced on an outer surface of the wall adjacent the passage, wherein the outward projectons are adapted to direct insertion of the sensor into the passage in a first orientation and to

Application/Control Number: 10/631,128

Art Unit: 3747

permit rotation of the sensor about the Longitudinal axis to a second orientation; and inserting the condition sensing portion into the passage in a longitudinal direction in the first orientation, rotating the senor about the longitudinal axis to me second orientation for engaging the inwardly projecting lug with the outwardly projecting lug to prevent removal of the sensor from the passage in the longitudinal direction, and attaching an external connection to the sensor, thereby preventing rotation of me sensor from the second orientation to the first orientation.

Regarding claim 7. wherein the external system connecting portion is joined to the condition sensing portion at a right angle.

8. (Original) The method of claim:, wherein the at least one radially outwardly projecting lug comprises two diametrically opposed lugs and the at least one radially inwardly projecting lug comprises two diametrically opposed lugs, and wherein rotating the sensor moves the Inwardly and outwardly projecting: lugs from a non-aligned condition in the first orientation to an aligned condition in the second orientation.

Communication

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Katrina B. Harris whose telephone number is 571-272-4842. The examiner can normally be reached on 6:00 AM -2:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Henry Yuen can be reached on 571-272-4856. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
